BioSystems, 20 (1987) 365—368
Elsevier Scientific Publishers Ireland Ltd.

SUBJECT INDEX
Volume 20

Achiral precursors, origin of chirality, racemization, 21
Amino acids, receptor evolution, food receptors, *Tetrahymena*, unicellular model, 225
Amplification of asymmetry, chirality of biomolecules, symmetry breaking, weak interactions, decomposition of amino acids, 15
Anisotropic oxygen transport, mathematical modeling, diffusion and permeability, perfused tissue, Po_2 histograms, 153
Asymmetric absorption of light, origin of biomolecular chirality, weak interaction, chiral symmetry breaking, 49
Asymmetric photolysis, origin of chirality, circularly polarized light, supernovae, neutron stars, synchrotron radiation, interstellar grains, molecular clouds, 99
Asymmetric polymerisation, autocatalysis, spatial dissipative structures, convection, 85
Asymmetric synthesis, symmetry, chirality, optical activity, parity violation, 7
Autocatalysis, asymmetric polymerisation, spatial dissipative structures, convection, 85

Beta-decay, origin of molecular chirality, internal timing of molecules, Cerenkov radiation, liquid scintillation, 63
Biomolecular chiral homogeneity, chiral fields, electroweak interaction, enantiomeric excess, parity non-conservation, 27
Biomolecular chirality, chiral symmetry breaking, non-equilibrium chemical systems, weak interactions, 75
Blood oxygenation, pulmonary capillaries, facilitated diffusion, permeability, numerical model and partial differential equations, 355

Carotenoids, microalgae, *Nanochlorum eucaryotum*, sporopollenin, eukaryotic phylogeny, cell wall, 133
Cell behaviour, model reactions, control circuit, chaos, 341
Cell line, hormone evolution, oligopeptides, hormonal imprinting, 231
Cellular automata, replication, mathematical models, self-organization, 143
Cellular networks, formation of "partly distinct" regions in neural nets, Neisser's model, 237
Cerenkov radiation, origin of molecular chirality, beta-decay, internal timing of molecules, liquid scintillation, 63
Chaos, model reactions, control circuit, cell behaviour, 341
Chemical evolution, optical activity, chiral molecules, origin of optical activity, Titan, 95
Chiral fields, biomolecular chiral homogeneity, electroweak interaction, enantiomeric excess, parity non-conservation, 27
Chiral molecules, optical activity, origin of optical activity, chemical evolution, Titan, 95
Chiral symmetry breaking, biomolecular chirality, non-equilibrium chemical systems, weak interactions, 75
Chiral symmetry breaking, origin of biomolecular chirality, weak interaction, asymmetric absorption of light, 49
Chirality, NMR, parity non-conservation, enautiomers, 57
Chirality of biomolecules, symmetry breaking, weak interactions, amplification of asymmetry, decomposition of amino acids, 15
Chirality, symmetry, optical activity, asymmetric synthesis, parity violation, 7
Circularly polarized light, origin of chirality, asymmetric photolysis, supernovae, neutron stars, synchrotron radiation, interstellar grains, molecular clouds, 99
Computer self-replication model, self-organization, tesselation automata, 329
Computer simulation, mollusc movement, 267
Control circuit, model reactions, chaos, cell behaviour, 341
Controlled metabolic pathway, response to influx and efflux rates, linear approximation, transfer function, feedback inhibition, 317
Convection, asymmetric polymerisation, autocatalysis, spatial dissipative structures, 85

Decomposition of amino acids, chirality of biomolecules, symmetry breaking, weak interactions, amplification of asymmetry, 15
Diffusion and permeability, mathematical modeling, perfused tissue, Po_2 histograms, anisotropic oxygen transport, 153

Early evolution, undulipodia, origins of the eukaryotic cell, serial endosymbiotic theory, evolution of eukaryotes, 115
Electroweak interaction, biomolecular chiral homogeneity, chiral fields, enantiomeric excess, parity non-conservation, 27
Enantiomeric excess, biomolecular chiral homogeneity, chiral fields, electro-weak interactions, parity non-conservation, 27
Enantiomeric excesses, parity violating energy differences, weak interactions in molecules, prebiotic evolution of biomolecular homochirality, weak neutral current, 37
Enantiomers, NMR, parity non-conservation, chirality, 57
Environmental change, game theory, homeostatis, metabolic response, 259
Eukaryotic phylogeny, microalgae, *Nanochlorum eucaryotum*, carotenoids, sporopollenin, cell wall, 133
Eukaryotic polyribosomes, protein biosynthesis, RNA-binding proteins, protein compartmentation, supramolecular organization, 275
Evolution of eukaryotes, undulipodia, origins of the eukaryotic cell, serial endosymbiotic theory, early evolution, 115
Excitability-inducing materials, proteinoids, thermal proteins, 219
Exons, protein structure, introns, molecular evolution, multi-domain proteins, RNA processing, 181
Exons, RNA, protein synthesis, primordial, 175

Facilitated diffusion, blood oxygenation, pulmonary capillaries, permeability, numerical model and partial differential equations, 355
Feedback inhibition, response to influx and efflux rates, controlled metabolic pathway, linear approximation, transfer function, 317
Food receptors, receptor evolution, amino acids, *Tetrahymena*, unicellular model, 225
Formation of "partly distinct" regions in neural nets, cellular networks, Neisser's model, 237

Game theory, environmental change, homeostatis, metabollic response, 259

Homeostatis, environmental change, game theory, metabolic response, 259
Hormonal imprinting, hormone evolution, oligopeptides, cell line, 231
Hormone evolution, oligopeptides, hormonal imprinting, cell line, 231

Injury, nerve, repair, postulate, 307
Injury, probability, model, nerve, repair, regeneration, 243
Internal timing of molecules, origin of molecular chirality, beta-decay, Cerenkov radiation, liquid scintillation, 63
Interstellar grains, origin of chirality, circularly polarized light, asymmetric photolysis, supernovae, neutron stars, synchrotron radiation, molecular clouds, 99
Introns, protein structure, exons, molecular evolution, multi-domain proteins, RNA processing, 181

Linear approximation, response to influx and efflux rates, controlled metabolic pathway, transfer function, feedback inhibition, 317
Liquid scintillation, origin of molecular chirality, beta-decay, internal timing of molecules, Cerenkov radiation, 63

Mathematical modeling, diffusion and permeability, perfused tissue, Po_2 histograms, anisotropic oxygen transport, 153
Mathematical models, replication, cellular automata, self-organization, 143
Metabolic response, environmental change, game theory, homeostatis, 259
Microalgae, *Nanochlorum eucaryotum*, carotenoids, sporopollenin, eukaryotic phylogeny, cell wall, 133
Model, probability, nerve, injury, repair, regeneration, 243
Model reactions, control circuit, chaos, cell behaviour, 341
Molecular clouds, origin of chirality, circularly polarized light, asymmetric photolysis, supernovae, neutron stars, synchrotron radiation, interstellar grains, 99
Molecular evolution, protein structure, exons, introns, multi-domain proteins, RNA processing, 181
Mollusc movement, computer simulation, 267
Multi-domain proteins, protein structure, exons, introns, molecular evolution, RNA processing, 181

Nanochlorum eucaryotum, microalgae, carotenoids, sporopollenin, eukaryotic phylogeny, cell wall, 133
Neisser's model, cellular networks, formation of "partly distinct" regions in neural nets, 237
Nerve, injury, repair, postulate, 307
Nerve, probability, model, injury, repair, regeneration, 243
Neutral theory of evolution, punctualism versus gradualism, phase transitions, 289
Neutron stars, origin of chirality, circulary polarized light, asymmetric photolysis, synchrotron radiation, interstellar grains, molecular clouds, 99
NMR, parity non-conservation, chirality, enantiomers, 57
Non-equilibirium chemical systems, biomolecular chirality, chiral breaking, weak interactions, 75

N-Terminal pyroglutamyl, thermal polyamino acids, pyroglutamic acid, 213
Numerical model and partial differential equations, blood oxygenation, pulmonary capillaries, facilitated diffusion, permeability, 355

Oligopeptides, hormone evolution, hormonal imprinting, cell line, 231
Optical activity, chiral molecules, origin of optical activity, chemical evolution, Titan, 95
Optical activity, symmetry, chirality, asymmetric synthesis, parity violation, 7
Origin of biomolecular chirality, weak interaction, chiral symmetry breaking, asymmetric absorption of light, 49
Origin of chirality, circularly polarized light, asymmetric photolysis, supernovae, neutron stars, synchrotron radiation, interstellar grains, molecular clouds, 99
Origin of chirality, racemization, achiral precursors, 21
Origin of molecular chirality, beta-decay, internal timing of molecules, Cerenkov radiation, liquid scintillation, 63
Origin of optical activity, optical activity, chiral molecules, chemical evolution, Titan, 95
Origins of the eukaryotic cell, undulipodia, serial endosymbiotic theory, early evolution, evolution of eukaryotes, 115

Parity non-conservation, biomolecular chiral homogeneity, chiral fields, electroweak interaction, enantiomeric excess, 27
Parity non-conservation, chirality, NMR, enantiomers, 57
Parity violating energy differences, weak interactions in molecules, prebiotic evolution of biomolecular homochirality, weak neutral current, enantiomeric excesses, 37
Parity violation, symmetry, chirality, optical activity, asymmetric synthesis 7
Perfused tissue, mathematical modeling, diffusion and permeability, Po_2 histograms, anisotropic oxygen transport, 153
Permeability, blood oxygenation, pulmonary capillaries, facilitated diffusion, numerical model and partial differential equations, 355
Phase transitions, punctualism versus gradualism, neutral theory of evolution, 289
Po_2 histograms, mathematical modeling, diffusion and permeability, perfused tissue, anisotropic oxygen transport, 153
Postulate, nerve, injury, repair, 307
Prebiotic evolution of biomolecular homochirality, parity violating energy differences, weak interactions in molecules, weak neutral current, enantiomeric excesses, 37
Primordial, RNA, exons, protein synthesis, 175
Probability, model, nerve, injury, repair, regeneration, 243
Protein biosynthesis, eukaryotic polyribosomes, RNA-binding proteins, protein compartmentation, supramolecular organization, 275
Protein compartmentation, protein biosynthesis, eukaryotic polyribosomes, RNA-binding proteins, supramolecular organization, 275
Proteinoids, thermal proteins, excitability-inducing materials, 219
Protein structure, exons, introns, molecular evolution, multi-domain proteins, RNA processing, 181
Protein synthesis, RNA, exons, primordial, 175
Pulmonary capillaries, blood oxygenation, facilitated diffusion, permeability, numerical model and partial differential equations, 355
Punctualism versus gradualism, phase transitions, neutral theory of evolution, 289
Pyroglutamic acid, thermal polyamino acids, *N*-terminal pyroglutamyl, 213

Racemization, origin of chirality, achiral precursors, 21
Receptor evolution, amino acids, food receptors, *Tetrahymena*, unicellular model, 225
Regeneration, probability, model, nerve, injury, repair, 243
Repair, nerve, injury, postulate, 307
Repair, probability, model, nerve, injury, regeneration, 243
Replication, cellular automata, mathematical models, self-organization, 143
Response to influx and efflux rates, controlled metabolic pathway, linear approximation, transfer function, feedback inhibition, 317
RNA-binding proteins, protein biosynthesis, eukaryotic polyribosomes, protein compartmentation, supramolecular organization, 275
RNA, exons, protein synthesis, primordial, 175
RNA processing, protein structure, exons, introns, molecular evolution, multi-domain proteins, 181

Self-organization, computer self-replication model, tesselation automata, 329
Self-organization, replication, cellular automata, mathematical models, 143
Serial endosymbiotic theory, undulipodia, origins of the eukaryotic cell, early evolution, evolution of eukaryotes, 115
Spatial dissipative structures, asymmetric polymerisation, autocatalysis, convection, 85
Sporopollenin, microalgae, *Nanochlorum eucaryotum*, carotenoids, eukaryotic phylogeny, cell wall, 133
Supernovae, origin of chirality, circularly polarized light, asymmetric photolysis, neutron stars, synchrotron radiation, interstellar grains, molecular clouds, 99

Supramolecular organization, protein biosynthesis, eukaryotic polyribosomes, RNA-binding proteins, protein compartmentation, 275
Symmetry breaking, chirality of biomolecules, weak interactions, amplification of asymmetry, decomposition of amino acids, 15
Symmetry, chirality, optical activity, asymmetric synthesis, parity violation, 7
Synchrotron radiation, origin of chirality, circularly polarized light, asymmetric photolysis, neutron stars, interstellar grains, molecular clouds, 99

Tesselation automata, computer self-replication model, self-organization, 329
Tetrahymena, receptor evolution, amino acids, food receptors, unicellular model, 225
Thermal polyamino acids, pyroglutamic acid, *N*-terminal pyroglutamyl, 213
Thermal proteins, proteinoids, excitability-inducing materials, 219
Titan, optical activity, chiral molecules, origin of optical activity, chemical evolution, 95
Transfer function, response to influx and efflux rates, controlled metabolic pathway, linear approximation, feedback inhibition, 317

Undulipodia, origins of the eukaryotic cell, serial endosymbiotic theory, early evolution, evolution of eukaryotes, 115
Unicellular model, receptor evolution, amino acids, food receptors, *Tetrahymena*, 225

Weak interaction, origin of biomolecular chirality, chiral symmetry breaking, asymmetric absorption of light, 49
Weak interactions, biomolecular chirality, chiral symmetry breaking, non-equilibrium chemical systems, 75
Weak interactions, chirality of biomolecules, symmetry breaking, amplification of asymmetry, decomposition of amino acids, 15
Weak interactions in molecules, parity violating energy differences, prebiotic evolution of biomolecular homochirality, weak neutral current, enantiomeric excesses, 37
Weak neutral current, parity violating energy differences, weak interactions in molecules, prebiotic evolution of biomolecular homochirality, enantiomeric excesses, 37
